

Insert the following new claims 32 and 33:

1 2/ 32. A method according to claim 31, further comprising the steps of:  
2 mounting a first electrical contact on the first half of the sheet; and  
3 mounting a second electrical contact on the second half of the sheet;  
4 wherein the folding step includes aligning the first and second halves of the sheet so that the  
5 first contact and the second contact abut so as to be electrically connected.

1 33. A radio frequency identification (RFID) transceiver, comprising:  
2 a sheet of polymer film folded in half along a fold boundary, so that the sheet has first and  
3 second halves joined along the fold boundary;  
4 an RFID transceiver integrated circuit and a first electrical contact mounted on the first half of  
5 the sheet; and  
6 a second electrical contact mounted on the second half of the sheet;  
7 wherein the first contact and the second contact abut so as to be electrically connected.
